Researchers are beginning to draw attention to the human side concerning the implications of the digital age. Cultural challenges faced by international virtual teams, management dilemmas relative to resource issues when dealing with cultural diversity, and human resource management challenges confronted by technical environments and nationally-qualified labor shortages are on the rise and need to be addressed as society enters a new era. Examining Cultural Perspectives in a Globalized World is a pivotal reference source that provides vital research on the promotion of new cultural models representative of the contemporary world and subject to digital transformation. While highlighting topics such as digital diversity, shared culture, and employee motivation, this publication

explores increasing the relevancy of culture in the globalized 21st century as well as the methods of revising current HR management policies. This book is ideally designed for managers, human resources management, executives, sociologists, consultants, practitioners, industry professionals, researchers, academicians, and students. The European Union has highlighted the issue of environmentally sound use of products in the context of Integrated Product Policy, IPP. Accordingly, consumers should have easy access to understandable, relevant and credible environmental information. Information about product characteristics is available in different forms and sources, but in many cases, relevant environmental information is not available on the product itself. The study described in this report was initiated in order to produce information on the state of user instructions regarding environmental information. User manuals of passenger cars and refrigerators were focused on, examining the advice which could diminish the harmful environmental effects of the use of these products. Other studied products included such durable products as textiles and furniture as well as such consumables as cleaning chemicals and recyclable paper products. The study raised many ideas about actions that could promote the status and 'eco-development' of instructions for use.
