Up In The Air celebrates the nature around and above us, encouraging children to look, listen, and take notice. From cloud patterns to

constellations, the chirrup of a single sparrow to the cacophony of the dawn chorus, and from trees that rustle in the wind to butterflies that flit about, this beautifully illustrated ebook encourages children to look, listen, and feel nature all around. Up In The Air looks at the habitats above our heads, uncovering the insects that make their homes in tree trunks and the animals that move from tree to tree in towering rainforests. It develops sky-watching skills so children can track the migration of birds and name the stars and planets of the night sky. As well as discovering the joy nature can bring to us, children will learn about how the living things inside this ebook are vital for our planet's future, whether they are insects pollinating plants or trees helping to make the air we breathe. DigiCat Publishing presents to you this special edition of "The Air Trust" by George Allan England. DigiCat Publishing considers every written word to be a legacy of humankind. Every DigiCat book has been carefully reproduced for republishing in a new modern format. The books are available in print, as well as ebooks. DigiCat hopes you will treat this work with the acknowledgment and passion it deserves as a classic of world literature. In 1915 James Roger McConnell enlisted as a US volunteer in the French Flying

Corps. He was part of a remarkable band of American volunteers which were formed into the famous American 'Lafayette' Escadrille. 'Flying for France' was his personal account of the war in the air as seen through the eyes a front-line pilot of the American Escadrille, which was then based at Verdun. His memoirs produce an amazing insight into the early aerial battles and trace the evolution of aerial warfare as the rickety aircraft of 1915 rapidly evolved into the purpose built fighters of 1917. Casualties among the American Escadrille were very high and McConnell's own luck finally ran out when he was ambushed by two German fighters and was killed in action in March 1917. His gripping and detailed memoir of the war is his lasting memorial; his honest account of the everyday life of a pilot in the Great War is matched only by 'Sagittarius Rising'. However his dramatic description of the battlefield of Verdun viewed from above is one of the classic descriptions of any wartime memoir and is unmatched by any other Great War writer. McConnell's memoir is made all the more moving by the fact that the reader is aware that the writer's life will soon be cut tragically short. Essential reading for anyone interested in military history or aviation. A retrieved man tells how music, from Patrick

Cargill to Jay-Z, retained the power to change the world in 2008. Years in insurance and marriage to the joyless Hilda have been no more than death in life to George Bowling. This and fear of another war take his mind back to the peace of his childhood in a small country town. But his return journey to Lower Binfield brings complete disillusionment. "Sugar in the air is a 'scientific romance' in which the idea of extracting sugar from the air is held, for the duration of the book, in suspended disbelief by the characters involved - especially those who need work in a period of economic recession. Along the way, we are shown the endeavour of manufacturing a new product: how it is developed and brought to the market. This could be a model for any design and production process, and this dimension of the book is one reason for reviving it. At the end of the novel, the central figure (unmistakably modelled on the author) is able to retire and to start writing a novel."--Publisher description. Et jubilæumsskrift, der beretter om den britiske "Royal Aero Club" gennem 50 år. America's air quality is better today than ever before in modern history and continues to steadily improve. How did this remarkable turnaround come about? Basing his conclusions on a painstaking compilation of long-term empirical data on air quality and emissions data extending from the pre-federalization era to the present (some dating back a century), Goklany challenges the orthodoxy that credits federal regulation for improving air quality. He

shows that the air had been getting cleaner prior to—and probably would have continued to improve regardless of federalization. States and localities, after all, have always been engaged in a race to improve the quality of life, which means different things at different stages of economic development. Goklany's empirical data refute once and for all the race-to-the-bottom rationale for centralized federal regulation. Moreover, technological advances and consumer preferences continue to play important roles in improving air quality. Goklany accordingly offers a regulatory reform agenda that would improve upon the economic efficiency and environmental sensitivity of air quality regulation. This volume investigates the many issues associated with air pollution. The author takes a look at the worldwide health threats that are caused by poor quality air. She continues by examining the toll taken on the Earth's environment to due human-created air emissions. She discusses methods to reduce pollutants in the atmosphere, and also state of politics as it pertains to air quality; she also offers a list of things that will need to be done to checked the problem of increased air pollution. Concisely capturing flying's special allure and excitement as well as its humor and tragedy, this follow-up to the author's popular *Slipping the Surly Bonds: Great Quotations on Flight* features 600 additional memorable thoughts on flight. * Great gift and general interest book, perfect for museum shops * Subjects include *The Wonder of Flight*,

Airports, Combat, Safety, Space Flight, UFOs, Pilots, and Birds * Includes quotations from Amelia Earhart, Wilbur Wright, and Roger Caras H. G. Wells' prophetic *The War in the Air* foretold the use of airplanes in warfare and the coming of World War I. First serialized in 1907 and published in book form in 1908, the novel tells the story of the forward-thinking tinkerer Bert Smallways. Alfred Butteridge is said to be the only English aviator to know the "secret of the flying machine." When Bert Smallways accidentally falls into Butteridge's hot air balloon, he soon finds himself enmeshed in a German plot to bomb New York city. The setting is the outbreak of war as German forces attempt to dominate the air before the Americans can succeed in building a large aerial navy. On the other side of the United States tensions with the "Confederation of Eastern Asia", an allegiance between China and Japan, compound into full scale war, leaving the U.S. to fight on both eastern and western fronts, on sea and in the air. An action-packed, empowering middle grade novel about a girl who has to speak up when her wheelchair motocross dreams get turned upside down. Twelve-year-old Emmie is working to raise money for a tricked-out wheelchair to get serious about WCMX, when a mishap on a poorly designed ramp at school throws her plans into a tailspin. Instead of replacing the ramp, her school provides her with a kind but unwelcome aide—and, seeing a golden media opportunity, launches a public fundraiser for

her new wheels. Emmie loves her close-knit rural town, but she can't shake the feeling that her goals—and her choices—suddenly aren't hers anymore. With the help of her best friends, Emmie makes a plan to get her dreams off the ground—and show her community what she wants, what she has to give, and how ready she is to do it on her own terms. *Air* is a smart, energetic middle grade debut from Monica Roe about thinking big, working hard, and taking flight. The first in-depth study of the long march of the US New Left after 1968 The sixties were a time when radical movements learned to embrace twentieth-century Marxism.

Revolution in the Air is the definitive study of this turning point, and examines what the resistance of today can learn from the legacies of Lenin, Mao and Che. It tells the story of the “new communist movement” which was the most racially integrated and fast-growing movement on the Left. Thousands of young activists, radicalized by the Vietnam War and Black Liberation, and spurred on by the Puerto Rican, Chicano and Asian-American movements, embraced a Third World oriented version of Marxism. These admirers of Mao, Che and Amilcar Cabral organized resistance to the Republican majorities of Nixon and Ford.

By the 1980s these groups had either collapsed or become tiny shards of the dream of a Maoist world revolution. Taking issue with the idea of a division between an early “good sixties” and a later “bad sixties,” Max Elbaum is particularly concerned to reclaim the lessons of the new communist movement for today's activists who, like their sixties' predecessors, are coming of age at a time when the Left lacks mass support and is fragmented along racial lines. With a new foreward by Alicia Garza, cofounder of #BlackLivesMatter.
