Presents a variety of material on the ten native groups of Quebec the Abenakis, Algonquins, Attikameks, Crees, Hurons, Micmacs, Mohawks, Montagnais, Naskapis and Inuit. Includes discussion of traditional lifestyle and beliefs as well their current way of life. Algonquian and Iroquois natives of the American Northeast were described in great detail by colonial explorers who ventured into the region in the seventeenth and eighteenth centuries. Beginning with the writings of John Smith and Samuel de Champlain, Gordon Sayre analyzes French and English accounts of Native Americans to reveal the rhetorical codes by which their cultures were represented and the influence that these images of Indians had on colonial and modern American society. By emphasizing the work of Pierre Franais-Xavier Charlevoix, Joseph-Franais Lafitau, and Baron de Lahontan, among others, Sayre highlights the important contribution that French explorers and ethnographers made to colonial literature. Sayre's interdisciplinary approach draws on anthropology, cultural studies, and literary methodologies. He cautions against dismissing these colonial texts as purveyors of ethnocentric stereotypes, asserting that they offer insights into Native American cultures. Furthermore, early accounts of American Indians reveal Europeans' serious examination of their own customs and values: Sayre

demonstrates how encounters with natives' wampum belts, tattoos, and pelt garments, for example, forced colonists to question the nature of money, writing and clothing; and how the Indians' techniques of warfare and practice of adopting prisoners led to new concepts of cultural identity and inspired key themes in the European enlightenment and American individualism. Employing innovative research and unique interpretations, these essays provide a fresh perspective on Native American history by focusing on how Indians lived and helped shape each of the United States.

- 50 chapters examine the role of Native Americans in the history and development of each state

Profiles the explorer who, upon hearing rumors of the Mississippi River, determined first to find it, then to claim it for France and establish French settlements from Canada to the Gulf of Mexico. "Seventeen essays highlight contemporary indigenous studies. Primarily for scholarly audiences, the essays reflect indigenous voices and consider Native worldviews while confronting issues such as indigenous identity, cultural perseverance, economic development, and urbanization. Discussions examine mainstream policies that influenced Native peoples in a number of eras and places"--Provided by publisher.

An investigation into 19th and 20th century French Canadian historians' biased and prejudicial accounts of native peoples (Indians), in New France (Quebec).

Tissue engineering and regenerative medicine is a rapidly evolving research field which effectively combines stem cells and biologic scaffolds in order to replace damaged tissues. Biologic scaffolds can be produced through the removal of resident cellular populations using several tissue engineering approaches, such as the decellularization method. Indeed, the decellularization method aims to develop a cell-free biologic scaffold while keeping the extracellular matrix (ECM) intact. Furthermore, biologic scaffolds have been investigated for their in vitro potential for whole organ development. Currently, clinical products composed of decellularized matrices, such as pericardium, urinary bladder, small intestine, heart valves, nerve conduits, trachea, and vessels, are being evaluated for use in human clinical trials. Tissue engineering strategies require the interaction of biologic scaffolds with cellular populations. Among them, stem cells are characterized by unlimited cell division, self-renewal, and differentiation potential, distinguishing themselves as a frontier source for the repopulation of decellularized matrices and scaffolds. Under this

scheme, stem cells can be isolated from patients, expanded under good manufacturing practices (GMPs), used for the repopulation of biologic scaffolds and, finally, returned to the patient. The interaction between scaffolds and stem cells is thought to be crucial for their infiltration, adhesion, and differentiation into specific cell types. In addition, biomedical devices such as bioreactors contribute to the uniform repopulation of scaffolds. Until now, remarkable efforts have been made by the scientific society in order to establish the proper repopulation conditions of decellularized matrices and scaffolds. However, parameters such as stem cell number, in vitro cultivation conditions, and specific growth media composition need further evaluation. The ultimate goal is the development of "artificial" tissues similar to native ones, which is achieved by properly combining stem cells and biologic scaffolds and thus bringing them one step closer to personalized medicine. The original research articles and comprehensive reviews in this Special Issue deal with the use of stem cells and biologic scaffolds that utilize state-of-the-art tissue engineering and regenerative medicine approaches. This book presents a comprehensive, state-of-the-art treatment of the acquisition of Indo- and Non-Indo-European languages in various contexts, such as L1, L2, L3/Ln, bi/multilingual, heritage languages, pathology as well as language impairment, and sign language acquisition. The book explores a broad mix of methodologies and issues in contemporary research. The text presents original research from several different perspectives, and provides a basis for dialogue between researchers working on diverse projects with the aim of furthering our understanding of how languages are acquired. The book proposes and refines new theoretical constructs, e.g. regarding the complexity of linguistic features as a relevant factor forming children's, adults' and bilingual individuals' acquisition of morphological, syntactic, discursive, pragmatic, lexical and phonological structures. It appeals to students, researchers, and professionals in the field. Lists name, age, sex, occupation, native of, ship, port/dept., arrival, destination.
