[Probability Tales](#) Feb 05 2021 This book explores four real-world topics through the lens of probability theory. It can be used to supplement a standard text in probability or statistics. Most elementary textbooks present the basic theory and then illustrate the ideas with some neatly packaged examples. Here the authors assume that the reader has seen, or is learning, the basic theory from another book and concentrate in some depth on the following topics: streaks, the stock market, lotteries, and fingerprints. This extended format allows the authors to present multiple approaches to problems and to pursue promising side discussions in ways that would not be possible in a book constrained to cover a fixed set of topics. To keep the main narrative accessible, the authors have placed the more technical mathematical details in appendices. The appendices can be understood by someone who has taken one or two semesters of calculus.

[Cloud Computing and Digital Media](#) Apr 19 2022 Cloud Computing and Digital Media: Fundamentals, Techniques, and Applications presents the fundamentals of cloud and media infrastructure, novel technologies that integrate digital media with cloud computing, and real-world applications that exemplify the potential of cloud computing for next-generation digital media. It brings together technologies for media/data communication, elastic media/data storage, security, authentication, cross-network media/data fusion, interdevice media interaction/reaction, data centers, PaaS, SaaS, and more. The book covers resource optimization for multimedia cloud computing—a key technical challenge in adopting cloud computing for various digital media applications. It describes several important new technologies in cloud computing and digital media, including query processing, semantic classification, music retrieval, mobile multimedia, and video transcoding. The book also illustrates the profound impact of emerging health-care and educational applications of cloud computing. Covering an array of state-of-the-art research topics, this book will help you understand the techniques and applications of cloud computing, the interaction/reaction of mobile devices, and digital media/data processing and communication.

[Stochastic Modeling and Mathematical Statistics](#) Oct 01 2020 Provides a Solid Foundation for Statistical Modeling and Inference and Demonstrates Its Breadth of Applicability Stochastic Modeling and Mathematical Statistics: A Text for Statisticians and Quantitative Scientists addresses core issues in post-calculus probability and statistics in a way that is useful for statistics and mathematics majors as well

[Databases, Types and the Relational Model](#) Apr 26 2020 Databases, Types, and the Relational Model: The Third Manifesto is a proposal for the future direction of data and database management systems (DBMSs). It provide a precise, formal definition of an abstract model of data, to be considered as a foundation for the design of a DBMS and a database language.

[APC Case Book](#) Jan 04 2021 Following his successful How to Pass the APC: Essential Advice for General Practice Surveyors, Austen Imber's latest publication examines surveyors' work in practice. The case work is based mainly on examples of APC candidates' critical analysis, and is supported by additional guidance on the key issues arising in practice. In a clear, practical way the book covers the public, private and corporate sectors and enables graduates to understand the roles of the various participants in the property industry. Subjects covered include investment valuation, development valuation/appraisal, profits valuation, the Red Book, lettings, sales, rent reviews, lease renewals, estate management, ratings, planning, development, regeneration, compulsory purchase, telecoms and insolvency. The hands-on style of the candidates' critical analysis, clearly shows the detailed reasoning behind the initial strategies and decisions throughout a case. The examples of APC interview questions and tasks for study are invaluable in encouraging graduates to consider further issues - including the many practical problems which graduates need to understand in order to succeed in practice and with their APC interview. Professional ethics are also represented within the cases featured. The APC Casebook is an essential tool in preparing for the final assessment stage of the APC, as well as being an important reference source for candidates throughout their APC training.

[Time: Let's Value It](#) Nov 26 2022 Time is not a single word to describe or to explain or to define. I dare to write because it's time wish to write about it. Time is going on morning to evening. Value it because the same moment will not return, that will be but the second one, the new one. Time is fickle and fearless, jumping like a deer, here and there. Time is “Sufiyana” (simple and plane), singing like kabir, carefree & self-willed. He says, at a place:

[Potential Wadge Classes](#) Nov 21 2019 Let Γ be a Bore class, or a Wadge class of Bore sets, and \aleph_α be a cardinal. A Bore subset B of \mathbb{R}^d is potentially in Γ if there is a finer Polish topology on \mathbb{R}^d such that B is in Γ when \mathbb{R}^d is equipped with the new product topology. The author provides a way to recognize the sets potentially in Γ and applies this to the classes of graphs (oriented or not), quasi-orders and partial orders.

[Research Methods in Language Variation and Change](#) Aug 31 2020 Methodological know-how has become one of the key qualifications in contemporary linguistics, which has a strong empirical focus.

Containing 23 chapters, each devoted to a different research method, this volume brings together the expertise and insight of a range of established practitioners. The chapters are arranged in three parts, devoted to three different stages of empirical research: data collection, analysis and evaluation. In addition to detailed step-by-step introductions and illustrative case studies focusing on variation and change in English, each chapter addresses the strengths and weaknesses of the methodology and concludes with suggestions for further reading. This systematic, state-of-the-art survey is ideal for both novice researchers and professionals interested in extending their methodological repertoires. The book also has a companion website which provides readers with further information, links, resources, demonstrations, exercises and case studies related to each chapter.

[Advanced Calculus](#) Jan 24 2020 Suitable for a one- or two-semester course, Advanced Calculus: Theory and Practice expands on the material covered in elementary calculus and presents this material in a rigorous manner. The text improves students' problem-solving and proof-writing skills, familiarizes them with the historical development of calculus concepts, and helps them understand the connections among different topics. The book takes a motivating approach that makes ideas less abstract to students. It explains how various topics in calculus may seem unrelated but in reality have common roots. Emphasizing historical perspectives, the text gives students a glimpse into the development of calculus and its ideas from the age of Newton and Leibniz to the twentieth century. Nearly 300 examples lead to important theorems as well as help students develop the necessary skills to closely examine the theorems. Proofs are also presented in an accessible way to students. By strengthening skills gained through elementary calculus, this textbook leads students toward mastering calculus techniques. It will help them succeed in their future mathematical or engineering studies.

[Statistics for Mining Engineering](#) Apr 07 2021 Many areas of mining engineering gather and use statistical information, provided by observing the actual operation of equipment, their systems, the development of mining works, surface subsidence that accompanies underground mining, displacement of rocks surrounding surface pits and underground drives and longwalls, amongst others. In addition, the actual modern machines used in surface mining are equipped with diagnostic systems that automatically trace all important machine parameters and send this information to the main producer's computer. Such data not only provide information on the technical properties of the machine but they also have a statistical character. Furthermore, all information gathered during stand and lab investigations where parts, assemblies and whole devices are tested in order to prove their usefulness, have a stochastic character. All of these materials need to be developed statistically and, more importantly, based on these results mining engineers must make decisions whether to undertake actions, connected with the further operation of the machines, the further development of the works, etc. For these reasons, knowledge of modern statistics is necessary for mining engineers; not only as to how statistical analysis of data should be conducted and statistical synthesis should be done, but also as to understanding the results obtained and how to use them to make appropriate decisions in relation to the mining operation. This book on statistical analysis and synthesis starts with a short repetition of probability theory and also includes a special section on statistical prediction. The text is illustrated with many examples taken from mining practice; moreover the tables required to conduct statistical inference are included.

[The Minimal Polynomials of Unipotent Elements in Irreducible Representations of the Classical Groups in Odd Characteristic](#) Oct 21 2019 The minimal polynomials of the images of unipotent elements in irreducible rational representations of the classical algebraic groups over fields of odd characteristic are found. These polynomials have the form $(t-1)^d$ and hence are completely determined by their degrees. In positive characteristic the degree of such polynomial cannot exceed the order of a relevant element. It occurs that for each unipotent element the degree of its minimal polynomial in an irreducible representation is equal to the order of this element provided the highest weight of the representation is large enough with respect to the ground field characteristic. On the other hand, classes of unipotent elements for which in every nontrivial representation the degree of the minimal polynomial is equal to the order of the element are indicated. In the general case the problem of computing the minimal polynomial of the image of a given element of order p^s in a fixed irreducible representation of a classical group over a field of characteristic $p > 2$ can be reduced to a similar problem for certain s unipotent elements and a certain irreducible representation of some semisimple group over the field of complex numbers. For the latter problem an explicit algorithm is given. Results of explicit computations for groups of small ranks are contained in Tables I-XII. The article may be regarded as a contribution to the programme of extending the fundamental results of Hall and Higman (1956) on the minimal polynomials from p -solvable linear groups to semisimple groups.

[The American Decisions, Containing All the Cases of General Value and Authority Decided in the Courts of the Several States](#) Aug 11 2021

[Financial Strategies for the Manager](#) Dec 23 2019 Part of Tsinghua University Texts, Financial Strategies for the Manager includes a range of financial management issues such as financial statement analysis, a systematic approach to financial performance appraisal, liquidity management and sales growth, working capital management, budgeting, foreign exchange and interest rate risk management, and a most useful tool not normally understood – EVA. The book is written in a concise and accessible style, minimizing the use of the technical jargon and complicated mathematical formulae. Included exercises enhance student learning and examples bolster ability to understand and use concepts in day-to-day situations. The material was originally developed for a large corporate client in the telecommunications business to assist non-financial managers in understanding financial theories in a practical way. It was expanded and revised into a text for a post-graduate course of the Asia/Pacific Management Co-operative Program, Capilano University, BC, Canada. Charles Priester is a professor at Capilano University of Canada; Jincheng Wang is a professor at the International Business School of Tianjin Foreign Studies University of China.
